EDUCATION

University of North Dakota

B.S. Electrical Engineering

Minor Mathematics

2016-2020

Oregon State University

B.S. Computer Science

2022-2024

SKILLS

MATLAB LabVIEW AutoCAD PLC
Electrical Schematics Electrical Wiring
Embedded Systems Python C/C++
Linux Robotics JavaScript SQL
x86-Assembly Full-Stack Development

PROFILE

Motivated and detail-oriented Electrical and Software Engineer with a solid background in designing and developing innovative hardware and software solutions. Experienced in embedded systems, microcontroller programming, and automation, with proficiency in C, Python, MATLAB and LabVIEW. Skilled at collaborating with cross-functional teams to deliver reliable, efficient, and cost-effective products. Strong problem-solving and troubleshooting abilities, with a focus on optimizing system performance and scalability. Quick to adapt to new technologies and methodologies, with a strong commitment to continuous learning, professional growth, and solving challenging problems through high-quality engineering solutions.

WORK EXPERIENCE

Project Electrical/Software Engineer

Parker Hannifin

Mentor, OH 2024-Current

- Set up, run, and monitor electrical and mechanical test setups in accordance with customer specifications, internal procedures, and relevant standards to validate product performance, reliability, and safety.
- Configure instruments, fixtures, and data acquisition systems for each test, verify proper operation, and make real-time adjustments to ensure accurate and repeatable results.
- Identify opportunities for automation and process improvements in the lab, implementing changes that shorten setup times, enhance data quality, and improve test stand safety.
- Perform hands-on electrical work including wiring, panel builds, and test fixture assembly while strictly adhering to electrical codes, lockout/tagout procedures, and lab safety protocols.
- Prepare concise test reports and documentation that summarize procedures, conditions, and results, supporting customer requirements, certifications, and internal decision-making.

Project Electrical/Software Engineer

rpGatta, Inc.

Aurora, OH 2020-2022

- Designed, built, and programmed custom assembly robotics for auto industry customers including Rivian, Toyota, and Nissan.
- Developed and tested control software programs in a variety of programming languages, often interfacing with new, custom Application Programming Interfaces.
- Designed custom user interfaces to allow machine operators and owners to quickly and efficiently control and troubleshoot processes, and conducted site-specific training for owners/operators on automation control systems and equipment.
- Configured complex automation systems based on contract specifications, including creating detailed flow diagrams, sequence of operations, bill of materials, network layouts, and electrical schematics.
- Assisted in loading and commissioning system and network-level controllers, validated complete system functionality, and resolved issues in collaboration with subcontractors and other trades.
